

AUCKLAND/WAIKATO FISH & GAME

A Meeting of Council will be held at the
NZ Deerstalkers Hall, Wairere Drive, Hamilton,
on Saturday 16 June 2019 commencing at 11a.m.

AGENDA

	<u>Page</u>
1. Apologies	
2. Possible conflicts of interest arising from meeting agenda	
3. Minutes of previous meetings held on 6 th April 2019 *	1
4. Matters arising from previous minutes	
5. Council correspondence *	5
6. Chief Executive's bi-monthly report & financial statements	6
6.1 Bi-monthly Chief Executives Report *	14
6.2 Financial Statements *	43
7. Conservation Infringement Systems Policy *	70
8. National Policy on Prosecutions *	84
9. 2019/20 Licence Fee Recommendation *	92
10. 2019/20 Budget and Operational Work Plan *	116
11. 2019/20 District Anglers Notice *	
12. Ward Ranch update	
13. Kakahi Property update	
14. OSH Report *	120
15. NZF&GC meeting 5-6 April 2019 *	121
16. General Business

M. Young
Chairman
28/05/2019

AUCKLAND/WAIKATO FISH & GAME

Minutes of a Meeting of Council
held at the NZ Deerstalkers Hall, Wairere Dr, Hamilton,
on Saturday 6 April 2019 commencing at 11 am.

PRESENT:

Chairman: G. Annan

Councillors: W. Howard, A. Kerr, C. Sherrard, S. Smith.

Staff: J. Dyer, A. Daniel, B. Wilson.

Visitors: P. Hardy (DoC)

1. APOLOGIES

M. Young, N. Juby, P. Shaw, E. Williamson, D. Cocks, G. Avery, D. Klee

It was moved;

that the apologies be accepted.

Smith/Kerr CARRIED

2. POSSIBLE CONFLICTS OF INTEREST ARISING FROM MEETING AGENDA:

None declared.

3. MINUTES OF PREVIOUS MEETING OF 9 FEBRUARY 2019:

It was moved;

that the minutes of the previous meeting of 9th February 2019 be accepted as a true
and correct record.

Howard/Kerr CARRIED

4. MATTERS ARISING FROM PREVIOUS MINUTES:

Councillor Smith reported that he was regularly checking Cambridge Lake for botulism but so far only averaging about one duck per week, which was far fewer than in previous years. Overall there appeared to be few botulism outbreaks in the Waikato, perhaps due to the exceptionally dry weather.

Councillor Smith expressed his disappointment that one of the properties with special conditions was actively trying to get on to Schedule 3 despite not raising this issue at the February Council meeting.

The Chairman informed the meeting that he had presented Mr John Finnerty with the Council's Merit Certificate at the recent AGM of the Hamilton Fish & Game Association. Mr Finnerty was very grateful and humble to receive the award.

5 CORRESPONDENCE:

A letter was received from Mr David Nordell, President of the Te Awamutu Fish & Game Association, recommending that Council recognise the considerable efforts by Grant Annan in organising and running the Annual Fishing Contest at Lake Arapuni for the last 25 years.

Mr Wilson emphasised the considerable promotional benefits of the competition and the value of the data obtained for the management of Lake Arapuni trout fishery.

Councillors voiced their strong support for Councillor Annan and his past and ongoing commitment to Fish & Game.

It was moved;

that Grant Annan be awarded Council's Merit Certificate for outstanding service and contributions to the Council, wildlife and conservation.

Sherrard/Smith CARRIED

Councillor Sherrard spoke on the many years of commitment to Fish & Game at both a local and regional level by Mr Murray Young including his role as Chairman. Councillor Sherrard recommended that Mr Young's commitment be formally recognised by Council. Other Councillors strongly supported the recommendation.

It was moved;

that Murray Young be awarded Council's Merit Certificate for outstanding service and contributions to the Council, wildlife and conservation.

Sherrard/Annan CARRIED

6. CHIEF EXECUTIVE'S BI-MONTHLY REPORT & FINANCIAL STATEMENTS:

In reply to a question Dr Daniel spoke on the sterilised trout project noting that he was waiting for Eastern Region staff to advise a suitable time to commence the project.

The recent swan cull by the Auckland Airport Authority was discussed and Mr Wilson advised that he would soon be meeting with the Authority's staff to discuss swan management in the region.

Mr Wilson reported on his recent meeting with Walking Access NZ who were working on enhancing access to public land in the North Waikato. Mr Wilson emphasised that there would be increasing demands for public access to Council's wetlands that could conflict with their wildlife values.

Mr Wilson introduced the Financial Statements observing that Fish licence sales would be similar to previous years. Game sales had a very slow start but had recovered in recent days. However, game sales were very much dependant on April rainfall and the forecast was not promising.

It was moved;

that the Chief Executive bi-monthly report and Financial Statements be accepted.
Smith/Kerr CARRIED

7. GOVERNORS MEETING, FEBRUARY 2019:

Councillor Annan spoke on the recent Governors Forum, held in Wellington that was attended by himself and Councillor Nigel Juby.

Points of note:

1. Sir Geoffrey Palmer & Elana Geddis spoke on the power and responsibilities of regional councils and the NZC.
2. Chair and Governor responsibilities – this was presented by Graeme Nahkies
 - Accept accountability for organisational wellbeing.
 - Adopt a more proactive approach to the council's role
 - Start and continue with the end in mind
 - Focus on what matters
 - Measure and monitor the right things
 - Exercise duty of care
 - Act honourably
 - Avoid using our position for personal advantage
 - Comply with all relevant legislation and organisation constitutional and policy requirements
 - Act in the best interest of the organisation as a whole
3. Audit review for North Canterbury F&G Council, presented by Bruce Robertson.

8. LAKE WAIKARE AND WHANGAMARINO WETLAND FLOOD SCHEME: FINAL REPORT:

Mr Wilson introduced the Final Report for the Lake Waikare and Whangamarino Wetland Flood Scheme. Under-spending on this project was \$45,000 less than budgeted.

9. WARD RANCH UPDATE:

Councillors discussed the report and acknowledged that there were significant financial implications of a mediation process.

10. HEALTHY RIVERS UPDATE:

Mr Wilson observed that all the funds budgeted for this project would be spent in this financial year.

11. OSH REPORT:

It was moved;

that the OSH Report be received.

Kerr/Smith CARRIED

12. GENERAL BUSINESS:

The Chairman expressed his appreciation to staff issuing certificates to the children who helped with duck banding over the summer. Councillor Smith strongly agreed noting that the children very much appreciated the certificates.

Dr Daniel spoke on the recent Hamilton Anglers kids fishing day on Cambridge Lake, emphasising that there were over 60 kids attending who were given soft baits provided by the event sponsor. Dr Daniel stated that a similar event would be held soon on Hamilton Lake, and that he would try and obtain more of the sponsor's products.

It was moved;

that up to \$300 be allocated towards the Hamilton Lake kids fishing day for prizes and giveaways.

Smith/Kerr CARRIED

The Chairman expressed his appreciation for the efforts of Dr Daniel and his family who recently spent the entire weekend camped at Lake Arapuni during the recent Te Awamutu F&G Club's fishing competition. The Chairman had received numerous comments from anglers expressing how great it was to see a Fish & Game officer there the whole weekend of the event.

It was reported that the Huntly Club was not having an Anzac Day shoot this year.

Councillors discussed the use of social media especially in regard to supporting Fish & Game. Mr Wilson advised Councillors to minimise their social media presence and that posts on such had the same legal status as a media release.

There being no further business the meeting concluded at 1.25pm.

Auckland/Waikato Fish & Game Council
156 Brymer Road Hamilton.

Murray Young Wetland.

I note on page 58 of the recent pre- gameseason magazine reference to a “New Fish & Game Wetland” at Evans Road.

In the past (if not still current) there existed Council Policy to the effect that where appropriate, wetlands should be named after Auckland/Waikato chairmen.

I would like to recommend to Council that the Evans Road wetland be named after the incumbent Auckland/Waikato Chairman Murray Young. I’d suggest that rather than name it just the “Young Wetland” (surnames being the case in other Fish & Game wetlands) it be called the “Murray Young” wetland In case in future there is some confusion as to why the name was chosen eg some may think it was because the wetland was a “young” one at time of creation?

I could cover the rest of this page (and several others) with a recitation of all the time, effort and personal expense Murray has selfishly donated to Auckland/Waikato Fish & Game over such a long period of time, this however would be superfluous as all but the most recent councillors are fully aware of what Murray has contributed – and if required can educate the newcomers of such.

Trusting this remit finds favour with Council.

Doug Emmett

9th May 2019

Bi Monthly Managers Report

Auckland/Waikato Fish & Game Meeting June 2018

OUTPUT 1: SPECIES MANAGEMENT

Project 1115 Fish Population Surveys

Lake Karapiro: Adam Daniel conducted an electrofishing survey for *Farmers for Positive Change*, a farming advocacy group, on a Lake Karapiro tributary that was full of eels due to the lake lever transfer program with no sign of trout.

Project 1117 Gamebird Research

Duckling Survival and Habitat, interim update. Project Manager: David Klec.
We used location data collected during brood observations to create 'brood buffers' and associated 'random buffer' from which we can evaluate brood-site selection. Digitizing all the habitats within these buffered areas took longer than expected but we have finally completed the digitization process and have extracted the data for analysis. To date - we have compared the differences in habitat composition between Southland and Waikato and have evaluated two models of habitat selection.

1. Habitat composition of buffers, such as the proportion of water, roads, dense vegetation, and anthropocentric areas within the buffers
2. Composition of manageable habitat types with the buffers, such as drains, ponds, effluent ponds, streams, ephemeral water, rank grass, woody cover (including trees and shrubs) and sedge.

Going forward - we will relate duckling and brood survival to the habitat types which hens with broods select. Then, because broods have very strong selection for aquatic habitats, we will combine GIS data with information collected during brood observations to develop a new data set that describes the characteristics of aquatic habitats used by broods (i.e. area of waterbody, dominant vegetation of waterbody, width of riparian area, etc). We will investigate patterns of habitat use associated with the characteristics of these habitat types and relate these components to duckling and brood survival rates.

We expect to have a draft completed no later than 30 June and a final report compiled by 31 July. Although this work is still in progress, a draft report that includes a brief introduction, some methods and preliminary results is available. If anyone would like to receive this, just contact David.

Meeting with Waikato University staff and student regarding Geese and Swan Study.
David met with a Masters student and supervisor looking at dietary composition of Canada Geese in estuarine environments in the south western harbours of our region. This project is being funded by WRC who decided that recent publicity generated by local iwi and landowners about the supposed impacts of geese and swan on these environments warranted further investigation. We have indicated that we would assist in sample collection providing swan are included in the study and gut content analysis is conducted in concert with stable isotopes.

Project 1122 Gamebird Harvest Survey

Hunter Surveys: The fog that blanketed the Waikato for the first 4 days of the hunting season made it challenging for many, especially combined with the lack of wind. Most hunters didn't see the sun or any birds more than 80m away until well into the afternoon on both days of opening weekend. On top of the fog, the prolonged dry also meant that several key hunting areas in wetlands and swamps such as the Whangamarino and Kopuatai were dry. Some guys stuck it out, but the results were very mixed. The fog helped those that had ducks returning to where they wanted be, but those hunters trying to pull ducks off flight lines found it very difficult. We have completed and loaded the data for opening weekend of the Game Bird Hunter Survey. These preliminary results indicate that average effort (hours hunted) was a bit lower than in previous years as were the number of ducks per hunter. The feedback we received suggests that many hunters just found conditions too frustrating and pulled the plug early, especially on the Sunday due to a lack of bird movement in their area. Despite the challenging conditions the average of 0.54 ducks per hunter per hour is about average in recent years and markedly better than 2015.

Table 1. *Average hours and number of grallards shot per hunter on opening weekend of the gamebird season for the last 5 years.*

Year	Hours	Grallard Harvest	ducks per hour
2015	12.1	5.3	0.44
2016	11.3	6.4	0.57
2017	12	6.1	0.51
2018	11.7	6.6	0.56
2019	10.4	5.6	0.54

Project 1161 Trout Releases:

Sterile Trout: Adam has been setting up the sterile trout project by sourcing the equipment and preparing for the June spawning and pressure treatment. Trout for next year were ordered and then the order was adjusted to account for increased prices.

Lake Pupuke: The annual release was held during school holidays with about 20% less children due to the 2018 advertisement being active on Event Finder and confusing some parents. 1,200 large trout were liberated, mainly large rainbow trout but also at least 100 brook char and brown trout.

Project 1162 Pheasant Releases:

We continue to provide comment to DOC regarding applicants wanting to do small scale pheasant releases. Currently for small-scale operations, DOC is not charging for permits, so it would pay to get in while this remains the case.

OUTPUT 2 HABITAT PROTECTION/MANAGEMENT

Project 1211 R.M.A.

Waikato District Plan: Further submissions

We reviewed the approximately 1,000 submissions made on the Waikato District Plan and made further submissions where appropriate. The main concern was those submitters seeking zoning changes to rural land next to wetlands and lakes. For example, one submitter wanted the land next to our North Shepherd Wetland changed to an industrial zoning. Another wanted the land between the Cathcart and the Blythen Wetlands zoned residential.

Healthy Rivers Plan Change 1 update

The Hearings for the Healthy Rivers Plan Change have been divided into three Blocks.

Block 1 (Outcomes) has been completed and Hearing Block 2 (Policies and rules) is now underway. Block 3 (Farm environment planning and other miscellaneous matters) is scheduled to begin in July.

For Block 1, the Council Officer's Report accepted a few minor submissions, but largely did not address the bigger picture issues we raised with the outcomes sought in the plan. We presented evidence on ecosystem health requirements (Dr. Adam Canning), fishery requirements (Adam Daniel), wetlands, shallow lakes and gamebird requirement (David Klee), and the planning framework required to accommodate these matters (Helen Marr). There were a large number of experts from other parties also giving expert evidence which related to freshwater outcomes. The hearing panel has directed that these witnesses enter conferencing to reach agreement on these issues, and highlight disagreement where it exists. We have asked Adam Daniel and Adam Canning to attend this conferencing. The process is closed and we await output from the experts.

For Block 2, the Officer's Report supported a number of our submissions, which was positive, however, it recommended further changes which were of concern to us (moving further away from an allocation regime where users consents can be linked to specified contaminant outputs). We presented evidence on the implications of the status quo for Fish and Game (Ben Wilson) instream and riparian actions required (Adam Daniel), on farm management actions required (Dr. Rebecca Eivers) and the planning framework required (Helen Marr). Primarily, while we identified the need for a new allocation system, we focused on the need in any case to improve riparian management (bigger setbacks for activities) and manage critical source areas for contaminants. We are concerned about the new consenting framework the Officers have now put forth (separating land use consents from the discharge consent required) which may enable consenting on a case-by-case basis with no ability to link consents to their cumulative effects in the receiving water bodies. Following from Block 2, there are a couple of questions raised by the Commissioners which we will need to respond to.

Anna is now collating the submission points which relate to Block 3, assessing which have already been covered and to what extent there are outstanding issues which need to be addressed in that Block. If matters are already largely covered, it may be possible to proceed without further expert input. However there are some important matters which we may wish to address specifically, ie: wetlands, lakes and forestry activities, which the process has to date largely not addressed. At this stage we are pencilled down for an appearance on the 14th August.

At the start of the process, it was signalled that there would be 4 conferencing processes to attempt to reach agreement prior to the hearing: Freshwater Outcomes, Commercial Vegetable Production, Farm Environment Planning, and Subcatchment approach. The Outcomes forum

(Anna attended) was unsuccessful in achieving anything and subsequent conferencing was required. Other forums have been (but for our attendance) solely industry, and from our attendances it is clear that we have more to gain by making our position known and focussing in the hearing on responding to forum outputs (rather than active engagement in the forums). Anna has requested to be kept informed and has contributed written statements of Fish and Game's position where required.

Whangamarino section 128 review: As part of the Whangamarino Section 128 review process a liaison group was established to meet at least 6 monthly and discuss ICM progress with meeting the requirements of conditions 24-39c of the Waikare/Whangamarino consent. David attended the first of these meeting which set some of the process and procedures of how the group would operate moving forward and to discuss updates with the consent.

Concurrently we received further information regarding the proposed section 128 review for the Te Onetea gate and we have given some preliminary feedback. A workshop has been proposed for the week prior to council meeting to discuss outstanding issues with the proposal. Key discussion points from our perspective will revolve around ensuring that lake levels are maintained closer to their targeted levels than currently, whilst still achieving the required sediment reduction targets.

Fonterra Consents:

We met with representatives from Fonterra to discuss the renewal of consents for the Te Rapa Dairy Factory. We have been sent draft conditions that we will be looking at in detail over the next month.

The consents for the Te Awamutu Fonterra factory have recently been granted. We're reasonably happy with the outcome which includes at our request "a total of \$80,000 over 5 years towards new or existing environmental enhancement projects". Fonterra will also be constructing cooling towers to partially reduce the heat content of their discharge, which was also a concern.

Comprehensive Consents: Adam and David met with some of the ICM managers and science staff to discuss the ongoing functioning of the comprehensive consents. A number of them are running well behind schedule especially the mitigation and enhancement plans. David also attended a separate meeting to discuss the Lower Piako consent.

Project 1221 Council Land

North & Central Shepherd Wetlands: A fire has destroyed a moderately large area of gorse, crown fern and other dry vegetation beside the railway tracks adjoining the Central Shepherd and also McKenzie Wetlands. Although some of it spread to the edge of our wetlands, no F&G assets like fencing and/or sheds were damaged. It is thought that a train's brakes may have seized, and this caused the sparks that started these fires.

Piggott Wetland: On May 17 a Landcare Research team lead by Dr. Quentin Paynter released 43 biological control beetles (*Neolema obloblini*), in the Piggott Wetland to control Tradescantia plant a.k.a. 'Wandering Willy'. This plant achieves 100% cover in many parts of this wetland under the kahikatea forest there. It will be interesting to see the effect in the years to come, but it should mean that the forest floor will once again be able to grow native and other seedlings with fruits to feed not only pheasants and other birds, but also native bats which not only live in the immediate area but which also feed on the forest floor – when they can find it, when this weed is gone

Photo: The Piggott Blocks newest resident, *Neolema oblongum*, (a.k.a. ‘Shiny’s’).

Mr Dyer sprayed a variety of other weeds in the Piggott Block, including those over the silt-control screens at each of the 3 “dead-creeks” that we have rehabilitated. On 17 May a staff member from Waikato District Council, accompanied Mr Dyer and confirmed that resource consent requirements about establishing cover on all exposed work soil areas has been met and therefore the silt-control screens can now be removed. This will mean eels, whitebait etc can then pass.

Pond Tagging: Prior to the season we had some mark-up disputes on our wetlands where registered pond holders had failed to tag their ponds. It is part of the conditions of tenure that all ballot holders tag their ponds as per the wildlife regulations. During the season a couple of ponds were found to have feeders still dropping grain. The onus is on individuals to ensure no food is being dispersed or cast around ponds after the 30-day exclusion period starts, whether that be by hand or from feeders. The feeders appeared to be attracting large numbers of pukeko and rat, with no ducks seen on the pond. It is questionable whether feeders, unless they are ‘on demand’, are beneficial to have on our wetlands. In our experience they feed more vermin than ducks. It was also evident that there is still a fair amount of lead shot being used on our wetlands, mainly through 20-gauge shotguns. This will be illegal from next year and we will need to ensure that hunters are well informed of this change leading into the 2020 season.

Project 1231 Non Council Land

Lake Waikare: John Dyer assisted DoC/WRC by spraying alligator weed and yellow flag on Harveys Point, Lake Waikare, (near F&G land), that might have been overlooked. The goal is to keep these 2 weeds out of this lake and hence reduce any further seeding of the Whangamarino Wetland downstream. There is a large boom in the Te Onetea Stream that is intended to entrain any future weed fragments of these plants from reaching this lake from the Waikato River. There is some debate about how effective this is. It is lit up at night like a disco to warn approaching boats.

WCEET Funding Applications: David received funding for both WCEET applications lodged for the latest funding round, totalling \$51,000. The projects include the construction, fencing and planting of 4 wetlands on private land. The projects have excellent support from other stakeholders such as WRC who are contributing towards the costs and helping with logistical support.

Project 1231 Assessment & Monitoring:

Water Quality Study: Adam has continued to follow up on the Lake Otamangakau discharge and has informed DOC and Genesis Energy staff that he would like them to have a contingency plan in place in 2020 to prevent heavy sediment loads from entering the Whanganui River. It appears this was largely ignored, and they intend to operate the system as they have in the past. If this discharge can be cleaned up or stopped there could be a significant improvement in water clarity in the upper Whanganui River during the peak summer months.

OUTPUT 3 PARTICIPATION

Project 1311 Access Negotiation

Te Kauwhata: A complaint has been received about the Roto Street, Te Kauwhata, boat ramp being full of silt. It turns out the Waikato District Council did not know they even had this asset and it will be quite a process of getting the community board to now bring the matter forward to do anything about it. Neil Rankin has indicated that the job might cost about \$1,000 though possibly a long-reach digger would do a more thorough job.

Likewise the boat launch site known as “The Domain” on the eastern side of the lake has had the access locked by the adjoining landowner who owns access to the small stream used by hunters to get their boats onto the lake. This is being followed up.

Hauraki Cycle Trail: We fielded numerous calls prior to and during the season which included the removal of hunter access signage by adjacent landowners and the locking of gates onto paper roads historically used by hunters due to the formation of the Hauraki Rail Trail. We were previously informed that the creation of the cycle way would in no way impact legal access to the area, so we were disappointed this situation occurred and are working with HDC and the HRT to establish vehicle access for legitimate recreational users.

Mark up Disputes: We also experienced more than our fair share of mark-up disputes this year, with the dry conditions leading to many hunters prospecting for new shooting spots. The paper claim tags continue to be problematic as tags are often destroyed by weather and the issue around double tagging.

Project 1341 Other Publications

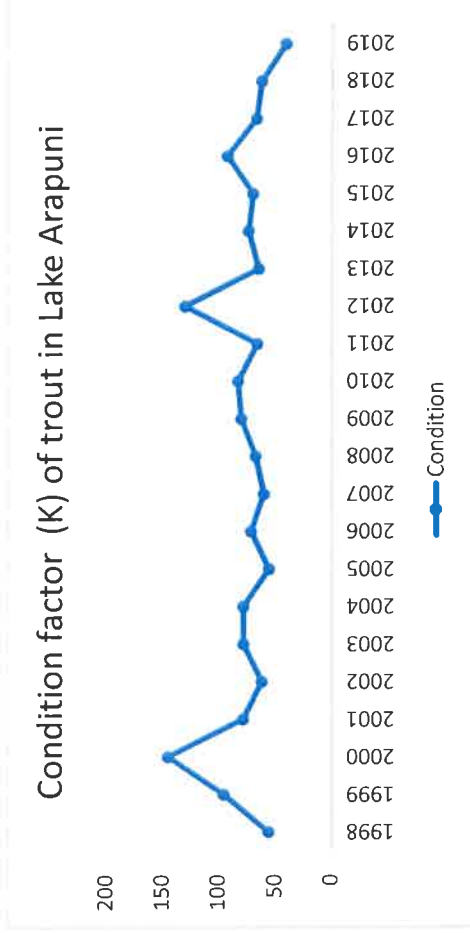

Adam continues to produce the reel life blog and John does Both Barrels.

OUTPUT 4 PUBLIC INTERFACE

Project 1431 Liaison Advocacy

Liaison with Schools: Adam went to the Mangatutu Stream with students from Tokoroa High to discuss water quality issues.

Te Awamutu F&G Fish Comp: Adam attended the Lake Arapuni Fishing comp for two days to fish and help collect the valuable data that is provided by the annual computation. There was a noticeable drop in condition factor of the fish that will need to be monitored and compared to water clarity.

Hamilton Anglers: Adam assisted with their kids fishing day at Lake Te Koutu in Cambridge. Attendance was great for the first event with around 60 kids. Adam gave out an entire box of Berkley soft baits and nearly all the kids caught fish.

Project 1441 Displays/Promotions

Club Nights/presentations: Staff attend the usual pre-season talks at Clubs and Hunting & Fishing stores.

John Dyer assisted the local police with putting information packs in maimais in both the Wairoa River at Clevedon and at the Kaipara and Kaukapakapa Rivers at Helensville.

OUTPUT 5 LAW ENFORCEMENT

Project 1511 Ranging:

John spent the weekend around Lake Waikare and the Lower Waikato River and checked 33 hunters which were all fully compliant. Adam and David were ranging up on the Hauraki Plains. In that area a total 78 hunters were checked with 6 instances of non-compliance detected and 5 shotguns seized. The morning started by checking a canal near Ngatea where every maimai checked 4 years previously had some form of non-compliance. Pleasingly all 32 hunters were fully compliant this time around. Even the two elderly gentlemen from whom we had seized a slab of lead shot and guns, that swore they would never change to steel shot had clearly had a change of heart.

Subsequently the rangers launched their boat on the Waihou river at Turua and checked maimais in the area. The tide wasn't ideal and wading through thick mud to get to hunters was a challenge. It is suspected that on at least 2 occasions hunters exited stage left as the rangers were checking neighbouring maimais. They detected several infringements, 3 unplugged guns and 1 lead shot. The most serious incident happened as they were boating down the river and put up a duck. A hunter subsequently fired at the bird with the boat about 80 yards away pelleting the boat. Not the ideal way to introduce yourself to the Rangers! In the maimai they found two hunters who initially claimed to have gamebird licences. One ended up confessing that he didn't have one, whilst the other signed the FTP. It turns out he did purchase a licence, but unfortunately for him about 2 hours after we wrote him the infringement. An unplugged, barely legal length pump action shotgun was also seized from the maimai.

We had issues this year with dumped ducks. Some breasted shelduck dumped in a drain behind housing became an issue as the communities Facebook site and media then became aware of it. John bagged and removed these. Another lot of un-breasted mallards were dumped beside a highway layby, reported by a fellow hunter, at a third site a large number of un-breasted birds were dumped.

Post opening weekend we have had the usual issues with hunters shooting under power, although these incidents are difficult to prosecute as witnessing the illegal activity occurring is not always possible. Boats are often large distances away by the time rangers get to the scene of these alleged activities and the high sided gun boats used are impossible to see into when approached to check for loaded firearms. Therefore hunters, especially those who know we are looking for them usually have ample time to unload guns and stash them in gun slips when we turn up on the scene.

John also received a tip off during the hunter survey about some illegal pond feeding activity. This region no longer applies for the annual exemption to allow for this activity to occur and hence enforce the law as per the regulations in the Wildlife Act. One remote pond with 22 parries and a mallard in the bag was festooned with maize along the water's edge. This was allegedly left over from harvesting and could not fit on the 30-tonne truck, so the enterprising hunter took the trailer-load remaining to the pond. He is now minus a gun.

OUTPUT 7: COUNCIL/CLUB SERVICING

OUTPUT 8: PLANNING REPORTING

Project 1841 National Liaison

Adam has been answering queries about triploid trout in response to the request to release.

Boundary signs: John Dyer has been checking and where necessary replacing the boundary signs on the State Highways on our borders.

OUTPUT 9 ADMINISTRATION

Project 1912 Administration

Honda ATV: Installed brush guard on ATV to protect front of vehicle

B. Wilson
Chief Executive.
